Mx-OPUS-LBKOD

FIXTURE INTEGRATED LIGHTING CONTROL

OVERVIEW:

Magnum’s fixture integrated Mx-OPUS-LBKOD node enables any lighting manufacturer with a high bay lighting offering to deliver simple, fully connected fixtures. The form factor includes a digital PIR and ambient light sensing for daylight harvesting applications as well as very accurate occupancy detection. Easy to integrate into a high bay fixture through an available half inch knock out, OPUS node bi-directionally communicates data to and from the lighting control network. When connected to a Philips Advance Xitanium SR LED or OSRAM Dexal driver, the Mx-OPUS-LBKOD is able to be powered from the driver and can extract critical data from the driver, including power reading.

DESCRIPTION:

The Mx-OPUS-LBKOD is designed to fit into most low bay LED lighting fixtures. The digital PIR sensor is rated for ceilings up to 15 feet. Although configurable for advanced settings, the Mx-OPUS-LBKOD is designed for plug and play applications. It is flexible enough for both localized control as well as software driven enhancement and also integration for BACnet through Magnum’s eBox (Mx-EBOX). The critical data points provided from this node includes occupancy status, light levels, light status and power reading.
